HENNGE K.K. — Global Internship Program Recruiting Team

Dear HENNGE GIP Recruiting Team,

I am writing to apply for the **Front-End Engineering Internship** (onsite, Tokyo) in HENNGE's Global Internship Program. My preferred batch is **Batch 5 (Nov 16 – Dec 18, 2026)**, and I am ready to relocate from Bangladesh for the full five-week program.

I am a Computer Science graduate with two years of software engineering experience, mostly in iOS. The work I enjoyed most — responsive interfaces, input validation, API integration, and clear error handling — led me to TypeScript and React. I am applying to GIP because I want structured front-end training, mentor feedback, and the chance to explain and improve my work in a collaborative setting.

For my coding challenge, I built a React and TypeScript signup form with real-time validation, accessible markup, and structured API error handling. At FileSure, I improved search and data fetching to cut API calls by 50%. At Appstick, I shipped a real-time ride-tracking UI and supported junior developers through code reviews. I would welcome the opportunity to grow these skills further with HENNGE's engineers in Tokyo.

Thank you for your time and consideration. Please find my CV and coding challenge submitted with this application. I would be happy to discuss my work in an interview.

Sincerely,

Ferdous Mahmud Akash
